Code Quest 6: The Treasure Temple

Deep in the jungle lies a forgotten temple filled with treasure-and traps. Solve Python puzzles to dodge danger and unlock the ancient vault!

Level 1: Gold Bar Counter

Count how many items in the list are labeled 'gold'.

Example:

Input: ["gold", "silver", "gold"]

Output: 2

```
def count_gold(items):
    # Your code here
    pass
```

Level 2: Statue ID Checker

Return True if the statue ID is a 6-digit number starting with 2 or 3.

Example:

Input: 234567

Output: True

```
def valid_statue_id(code):
    # Your code here
    pass
```

Level 3: Trap Step Finder

Return a list of numbers between 1-20 divisible by 4.

Example:

Output: [4, 8, 12, 16, 20]

```
def trap_steps():
    # Your code here
    pass
```

Code Quest 6: The Treasure Temple

Final Level: Vault Key Generator

Reverse a sentence and capitalize every word.

Example:

Input: "seek and you shall find"

Output: "Find Shall You And Seek"

```
def generate_key(phrase):

    # Your code here

    pass
```
